Why is air, ventilation and the indoor climate important?

We spend 90% of our time indoors. The air we breathe is important for our health and wellbeing. That is why good ventilation is important, to provide a healthy indoor climate. The purpose of ventilation is to remove pollutants in the air such as dust particles, fumes and damp, and to bring in clean fresh air.

Good ventilation makes it possible for everyone to live in a healthy indoor climate, as it helps to reduce:

- Pollution from dust and pollen, which cause allergies
- Costly pollution from damp, dust and moulds
- Undesirable noise and gases in the environment
- Carcinogenic pollution from radon
- Harmful dust and polluted air
- Draughts and energy loss

Smart installations

Today, we expect our installations to look smart. A black ventilation product from Flexit adds that little extra touch for you and your home.
